SKILLS

Programming
Dart · Flutter · PocketBase · Arduino

Networking and infrastructure
Network design and management · Infrastructure budgeting

Databases
Database design

Operating systems
Linux, Windows and macOS

Hardware and support
Equipment repair and diagnostics · Technical support · Electronics

Design and fabrication
Autodesk Fusion 360 · 3D printing · Laser cutting (RDWorks)

LANGUAGES

Spanish · Native

English · C1 (certified)

PROFILE

I am deeply passionate about technology and eager to keep learning new concepts. I am currently in the final year of my IT Technician program, during which I have completed a wide range of projects that contributed to my training. Outside of school, I have taken several programming and development courses, with a special focus on Flutter. In the future, I plan to pursue a degree in Systems Engineering to keep expanding my knowledge and start specializing in technologies I am interested in, such as low-level programming and artificial intelligence.

EXPERIENCE

Professional Internship — Mar. 2026 – Present
Technical Secondary School No. 2 of Lanús “Dr. Valentín Alsina”

- Diagnosis and repair of computers and laptops to donate them to other institutions.
- Design of 3D objects in Autodesk Fusion 360, from scratch or from blueprints.
- Camera installation and network cabling; general infrastructure maintenance.

PROJECTS

Digital inventory management system — Mar. 2026 – Present
Dart, Flutter, PocketBase

- I proposed and lead the digitization of the school’s tool storeroom, which had no record of its tools or their movements.
- The app allows users to register items, lend tools to students, calculate due dates, issue ID cards, email them, and view the movement history.

Ultrasonic radar with visual interface — Jun. 2025 – Oct. 2025
Arduino, Processing, 3D printing

- I led the development of a device with Arduino, a servo, and an ultrasonic sensor that detects the distance and position of objects (40 cm, 180° rotation), with an audible alarm, an indicator light, and visualization in Processing.
- 3D-printed enclosure. Presented at several regional exhibitions in the “Innovation” category.
- Designed as the foundation for an assisted-walking system for people with visual impairments.

EDUCATION

IT Technician — 2022 – Dec. 2026
Technical Secondary School No. 2 of Lanús “Dr. Valentín Alsina”

Advanced Flutter Course — Partially completed
Udemy – Fernando Herrera
